Choosing the Right Ramp

Slope and Size: Ramps used for persons with disabilities should ideally have a maximum slope of 1:12 — one foot of ramp length for each inch of rise (exceptions exist). Ramps for steps greater than 6" must have handrails.

Width: Ramps used for new construction, for curbs, and where situations allow should be at least 36" wide (consider the election-series ramps custom-designed for this purpose). Narrower ramps (e.g. 32") are acceptable in certain circumstances such as within a door frame less than 36" wide.

If you are unsure about the correct ramp to use, please measure the height of the step or threshold and call us toll free at 1.866.232.5487 or email us at sales@inclusionsolutions.com.
